SUMMARY

Data & Analytics Engineer with 5+ years of experience building Data Platforms and expanding their business value through self-service analytics, near-real-time data delivery and automated Data Quality & Observability. Brings an operational and systems-oriented mindset shaped by 9 years in railway network capacity, planning and operations. Currently completing an Engineering degree in Computer Science, Big Data & Machine Learning at EFREI.

PROFESSIONAL EXPERIENCE

Analytics Engineer — 2025 - Present
Verisure

- Automated Data Quality monitoring across 91 datamarts and 430 daily tests, surfacing issues earlier, reducing manual controls and protecting trust in business-critical data.
- Unified anomaly monitoring and prioritisation into a shared observability model, giving Data teams a consistent view of data health and accelerating incident qualification and response.
- Designed the observability foundation to expand with new domains and growing Data usage, keeping monitoring consistent as the platform supports more products and business use cases.

Data Engineer — 2022 - 2025
Heetch

- Built the core transformation layer of Heetch's new GCP Data Platform, moving data availability from daily refreshes toward hourly / near-real-time and supporting faster BI and AI use cases.
- Rebuilt the transformation layer around code, testing and orchestration, making business logic safer to change, easier to maintain and faster to evolve with new analytical needs.
- Delivered ETL pipelines and microservices that powered operational business workflows and teams, with end-to-end ownership from requirement definition to production support.

BI Engineer / Data Product Owner — 2021 - 2022
FoodChéri, Seazon

- Built a multi-source Data Platform as the foundation for self-service analytics, giving business users easy access to curated data through BI tools.
- Led the migration from Tableau to Metabase, selecting a simpler, more accessible tool better suited to the company and accelerating data self-service adoption.
- Scaled self-service analytics from 2 to 25 active analysis producers, extending data-driven decision-making across the company and helping teams answer day-to-day questions faster through training, documentation and hands-on enablement.

Railway Network Capacity & Passenger Operations — 2012 - 2019
SNCF

- Managed network-capacity planning for freight customers, securing train paths and resolving capacity/work conflicts from long-term planning through day of operation.
- Designed and improved passenger-management plans for RER C during works, major events and disruptions, introducing KPIs to assess their operational effectiveness.

EDUCATION

Engineering Degree in Computer Science, Big Data & Machine Learning — 2025 - 2028
EFREI Paris | Master's-level qualification | Year 2 of 3

Data Science Developer — 2020 - 2021
Jedha Bootcamp | Bachelor's-level qualification

University Diploma in Logistics & Transportation Management — 2008 - 2010
IUT de Chartres | Two-year higher education qualification

SELECTED IMPACT

91 data marts · 430 daily tests
Automated and industrializd Data Quality monitoring

2 → 25 active analysis producers
Self-service analytics adoption

Daily → near-real-time
Data availability at Heetch

TECHNICAL SKILLS

Data Engineering
SQL / PL/SQL, Python, Dataform, dbt Core, Airflow

Data Platforms
Snowflake, BigQuery, Redshift, S3, GCS

Data Quality & Observability
Dbt tests, Elementary, Dataform assertions

Analytics & BI
Looker, Metabase, Tableau, Dataiku

Software & APIs
JavaScript, Java, Git, REST, GraphQL

LANGUAGES

French. Native

English B2 | TOEIC 825
